

(d) Pre-Registered Not-Computed Audit [Descriptive]

```
1. L8_zarrabi_product: status = 'not computed'
   Reason: the Zenodo record (doi:10.5281/zenodo.13883263) states no unit f
   or mf_width/mf_depth; docs/3 13.5 requires the unit to be asserted from the record
2. Event_1 'far' Stratum CIs (H2 & S2): 'fewer than 30 sites in a repeat'
   Sites/repeat: H2 Q1={}, S2={'0': 1, '1': 1, '2': 1} (<30 floor)
3. S-IND Multi-COMID UQ: not_computed_multi_comid = 98
   Evaluated on n_locations_single = 33 single-COMID (docs/3 13.5)
4. S-IND Dropped Predictions: A_J|primary|S-IND = 81 dropped
   (50/131 evaluated; all other models = 0 dropped)
5. F_S Stratum rho(n, S): 'undefined: an input is constant in this stratum'
```
